

# **Seminole County Website Redesign Update**

**Board of County Commissioners  
January 13, 2026**

# Agenda

- Purpose
- Background
- Progress
- Next Steps

# Purpose

- Provide an update on the County website redesign and demonstrate improvements in performance, accessibility, and citizen-facing services.

# Agenda

- Purpose
- Background
- Progress
- Next Steps

# Background

## The Challenge

- The County website is one of our most heavily used services, averaging nearly 300,000 views per month
- The previous platform was built on a proprietary Content Management System (CMS)
- Updates were slow, costly, and difficult to scale
- Mobile performance lagged behind user behavior
- Emergency updates required manual workarounds and page refreshes

# Background

## Board Action

- On October 22, 2024, the BCC awarded a contract to SGS Technologie for the County's website redesign

## Why Action Was Required

- The legacy content management system (CMS) could no longer support the County's needs
- Maintenance costs increased without performance gains
- Security, accessibility, and scalability risks were growing
- A modern CMS was necessary to support service delivery, emergencies, and growth

# Agenda

- Purpose
- Background
- Progress
- Next Steps

# Progress

## New Enterprise Content Management System: Sitefinity

- The County transitioned from a proprietary CMS to Sitefinity on June 15, 2025, providing greater flexibility and control
- Sitefinity is widely used by major public-sector and state agencies
- Enhances security, stability, and long-term support for the County's digital services

# Progress

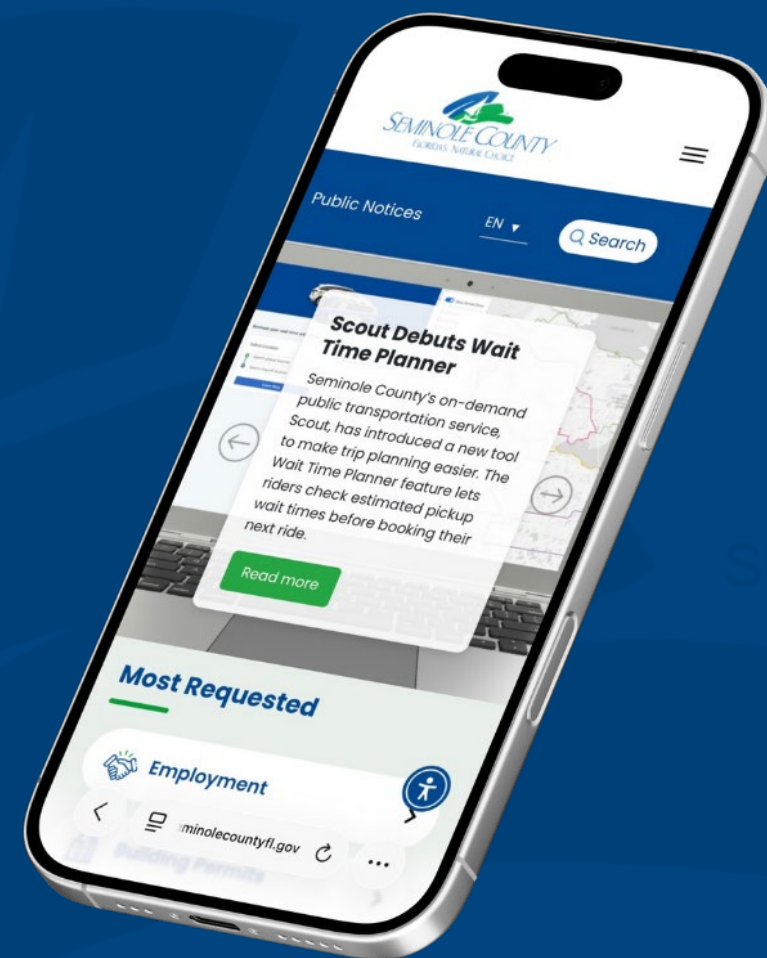

## Site Sync: Information That Moves as Fast as We Do

- Automatically refreshes pages every few seconds – no user action required
- Ensures users always see the most current information
- Critical for emergencies and fast-moving events
- Eliminates reliance on manual page refreshes

# Progress

## Built for How Residents Browse

- Nearly two-thirds of County web traffic is mobile
- The old site struggled on phones and tablets, delivering an inconsistent user experience
- The new site designed with **mobile-first**, rather than retrofitted for mobile
- Improved readability, navigation, and accessibility

# Progress

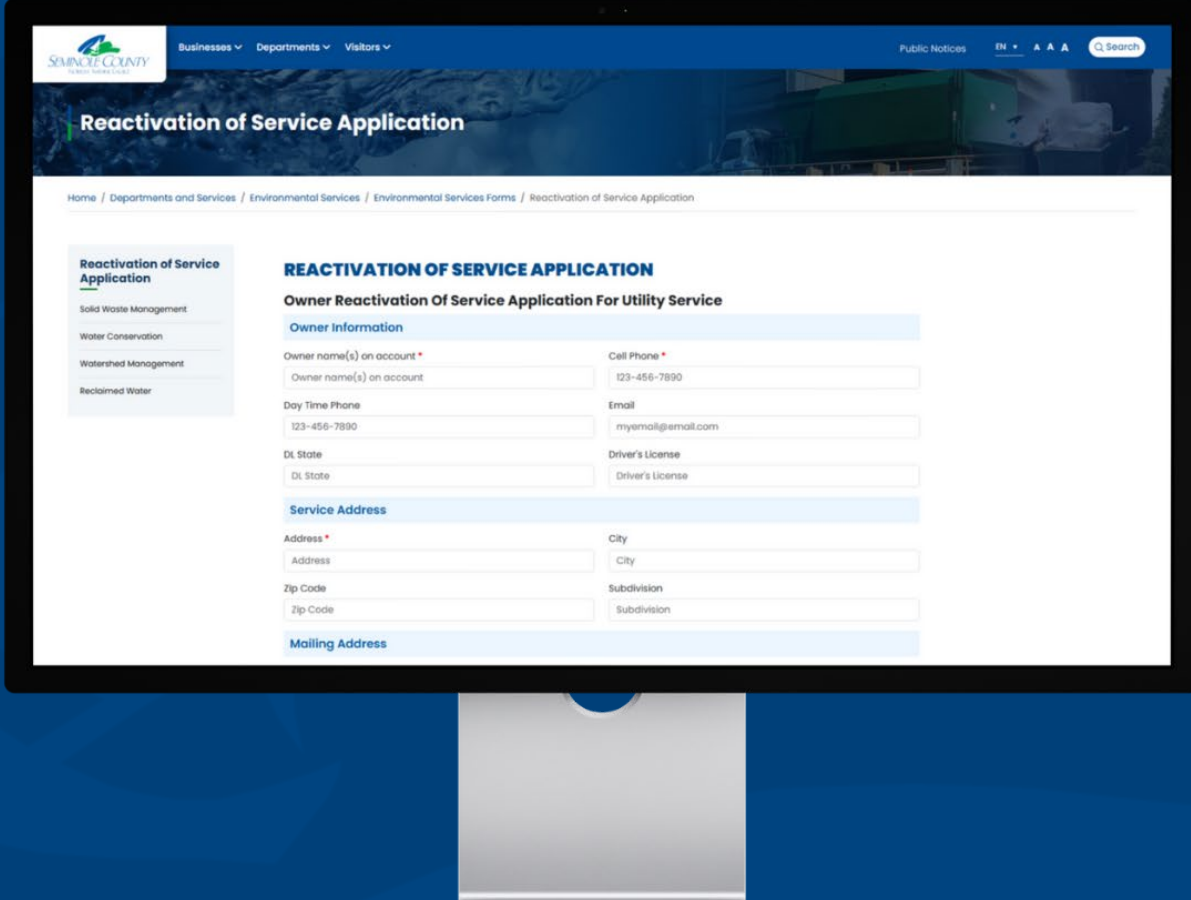

## Accessibility by Design: Built to Serve Everyone

- Built to support modern ADA and WCAG accessibility standards
- Improved compatibility with screen readers and assistive technologies
- Keyboard-friendly navigation and scalable text
- Stronger color contrast and clearer typography
- Built-in language tools that allow residents to translate content and access information more easily
- Accessibility and language access integrated into page templates—not retrofitted later

# Progress

## From Custom Builds to Flexible Tools: Form Development

- Previously, every form required custom development
- Forms are now configurable widgets managed through an admin portal
- This ensures greater consistency across departments, faster updates, and less maintenance

The screenshot displays the Seminole County website's 'Reactivation of Service Application' page. The page features a blue header with the Seminole County logo and navigation links for 'Businesses', 'Departments', and 'Visitors'. A search bar is located in the top right corner. The main content area is titled 'Reactivation of Service Application' and includes a breadcrumb trail: 'Home / Departments and Services / Environmental Services / Environmental Services Forms / Reactivation of Service Application'. On the left, a sidebar lists categories: 'Reactivation of Service Application', 'Solid Waste Management', 'Water Conservation', 'Watershed Management', and 'Reclaimed Water'. The main form area is titled 'REACTIVATION OF SERVICE APPLICATION' and 'Owner Reactivation Of Service Application For Utility Service'. It contains several sections for data entry: 'Owner Information' with fields for 'Owner name(s) on account', 'Cell Phone', 'Day Time Phone', 'Email', 'DL State', and 'Driver's License'; 'Service Address' with fields for 'Address', 'City', 'Zip Code', and 'Subdivision'; and 'Mailing Address'.

# Progress

## Page Templates

- Standardized templates improve navigation
- Ensures brand and design consistency
- Reduces one-off page builds
- Easier long-term maintenance

# Progress

## Connected Systems: API Integration

- Supports integrations across platforms
- Examples include:
  - YouTube video feeds
  - Calendars and scheduling tools
  - Service and data systems
- Reduces duplication and improves accuracy

# Progress

## News, Stories, and Events — Automatically Updated

- County news and information produced by Communications fuels the website:
  - Latest News
  - Featured Stories
  - Enhanced Events Calendar
- Continuously refreshed content that keeps information timely, accurate, and engaging

# Progress

## **BETTER SEARCH: Find What You Need Faster**

- Improved indexing and search accuracy
- Better handling of common service requests
- Fewer clicks and less frustration for users

# Progress

## How the Website Is Maintained

- Shifted from decentralized to centralized model
- Office of Communications manages content and standards
- IT manages security, servers, and infrastructure
- Improves security, consistency, and accountability

# Agenda

- Purpose

- Progress
- Next Steps

# Next Steps

## Ongoing Improvements

- Media and partner toolkit template recently launched
- New Boil Water Advisory system in development
- Future enhancements under evaluation, including asset management, digital integration with the Citizen Engagement Center, and API integration with Alert Seminole.
